

Snakes & Ladders Game

Shivdutt Sharma
Ravi Shrimal
Arik Pamnani

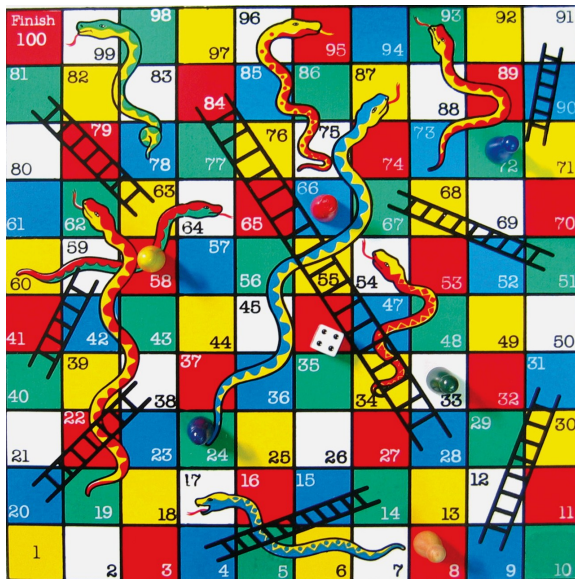

Supervised by: Joyce Meki and Vishwanath Hiremath

Indian Institute of Technology Gandhinagar

May 5, 2017

- Our Project is implemented on the TI MSP430F5529.
- We used IDE Code Composer Studio

Structure of the Game

Rules of the Game

- It is a two player game, one who reaches the end first will win.

Rules of the Game

- It is a two player game, one who reaches the end first will win.
- If a player touches snake or ladder it's position will be changed accordingly.

Rules of the Game

- It is a two player game, one who reaches the end first will win.
- If a player touches snake or ladder it's position will be changed accordingly.
- Each Player will get only one chance at a time.

Rules of the Game

- It is a two player game, one who reaches the end first will win.
- If a player touches snake or ladder it's position will be changed accordingly.
- Each Player will get only one chance at a time.
- To Start, Player have to get 1 or 6 first.

Hardwares Used

- TI MSP430 F5529.

Hardwares Used

- TI MSP430 F5529.
- LED Dot Matrix (7X5)

Hardwares Used

- TI MSP430 F5529.
- LED Dot Matrix (7X5)
- 7 Segment Display

Hardwares Used

- TI MSP430 F5529.
- LED Dot Matrix (7X5)
- 7 Segment Display
- Breadboards

Overview of the Code

- Generated a random number between 1 and 6 on 7 Segment Display

Overview of the Code

- Generated a random number between 1 and 6 on 7 Segment Display
- Showed positions of the players on two different LED grids

Overview of the Code

- Generated a random number between 1 and 6 on 7 Segment Display
- Showed positions of the players on two different LED grids
- Programmed two switches for two players.

Overview of the Code

- Generated a random number between 1 and 6 on 7 Segment Display
- Showed positions of the players on two different LED grids
- Programmed two switches for two players.
- Once the player wins, all the LEDs of that player will glow.

Overview of the Code

- Generated a random number between 1 and 6 on 7 Segment Display
- Showed positions of the players on two different LED grids
- Programmed two switches for two players.
- Once the player wins, all the LEDs of that player will glow.
- If a player touches snake or ladder, LED will blink consecutively on that location and the new location for some time.

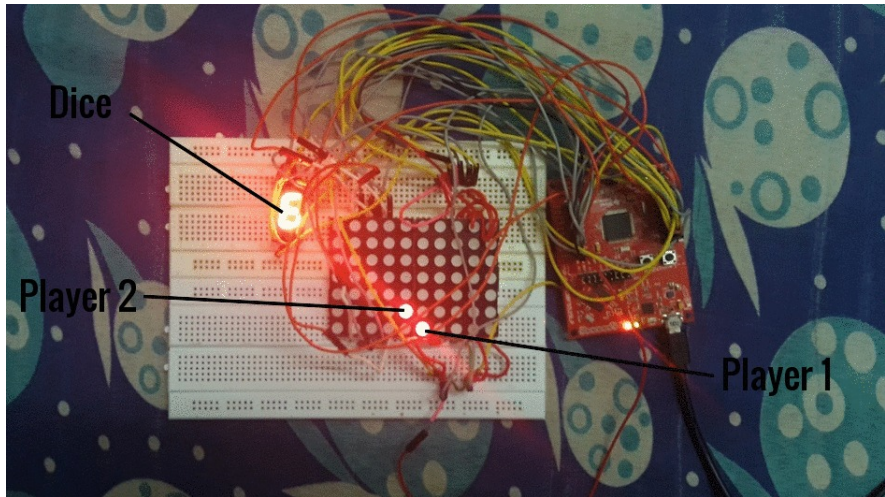

Overview of the Code

- Generated a random number between 1 and 6 on 7 Segment Display
- Showed positions of the players on two different LED grids
- Programmed two switches for two players.
- Once the player wins, all the LEDs of that player will glow.
- If a player touches snake or ladder, LED will blink consecutively on that location and the new location for some time.
- At each time random seed is given to generate new random family for the game.

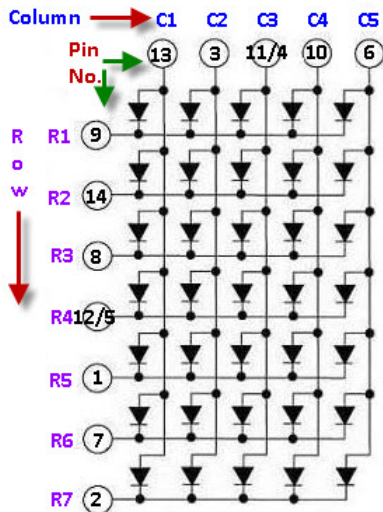

Overview of the Code

- Generated a random number between 1 and 6 on 7 Segment Display
- Showed positions of the players on two different LED grids
- Programmed two switches for two players.
- Once the player wins, all the LEDs of that player will glow.
- If a player touches snake or ladder, LED will blink consecutively on that location and the new location for some time.
- At each time random seed is given to generate new random family for the game.

LED Dot Matrix

LED Dot Matrix Datasheet

- **LED Dot Matrix**

- Rows are anode based and columns are cathode based

- **LED Dot Matrix**

- Rows are anode based and columns are cathode based
- To glow $r4(\text{row } 4), c4(\text{column } 4)$ $r4$ should be low and $c4$ should be high

- **LED Dot Matrix**

- Rows are anode based and columns are cathode based
- To glow r_4 (row 4), c_4 (column 4) r_4 should be low and c_4 should be high

- **7 Segment Display**

- Pins of 7 Segment are mapped accordingly to generate numbers

- **LED Dot Matrix**

- Rows are anode based and columns are cathode based
- To glow r_4 (row 4), c_4 (column 4) r_4 should be low and c_4 should be high

- **7 Segment Display**

- Pins of 7 Segment are mapped accordingly to generate numbers

- **Switches**

- Two switches are devoted to two players.

- **LED Dot Matrix**

- Rows are anode based and columns are cathode based
- To glow r_4 (row 4), c_4 (column 4) r_4 should be low and c_4 should be high

- **7 Segment Display**

- Pins of 7 Segment are mapped accordingly to generate numbers

- **Switches**

- Two switches are devoted to two players.
- once a player presses his switch a random number is generated on 7 segment display.

- **LED Dot Matrix**

- Rows are anode based and columns are cathode based
- To glow r_4 (row 4), c_4 (column 4) r_4 should be low and c_4 should be high

- **7 Segment Display**

- Pins of 7 Segment are mapped accordingly to generate numbers

- **Switches**

- Two switches are devoted to two players.
- once a player presses his switch a random number is generated on 7 segment display.

Thank You!
